Allowing for an extension on information collection has many benefits in different areas. Collecting this information seems to have many benefits to regulatory processes and ensuring policies are followed. However, I can't help but think that an extension on the collection of specific information can benefit other organizations as well. Many non-typical animals that are transported often carry unique zoonotic pathogens. Ensuring that collection of paperwork continues, especially medical records could be very beneficial to organizations focused on public health and epidemiology. This information could also be useful for organizations that track and control illegal pet trade and trafficking. The burden of collecting this information could also be compensated in value if information is added to a database that can be accessed by government organizations that can use the information to better other policies.
