SUPPORTING STATEMENT B

B. Collections of Information Employing Statistical Methods

1. Potential respondent universe and respondent selection method

The potential respondent universe for applicants includes young people (K through college) and those who support them, such as parents, teachers, counselors, etc.; the broader educational, research, and public health community; and other respondents. Other respondents may include self-selected broad-based groups of individuals who register for and attend NCHS sponsored outreach events and activities; persons who access the NCHS Website or are on NCHS listservs; or those who contact NCHS directly for information.

The potential respondent universe for the attendees is a subset of the above applicants of young people and their parents, teachers, and counselors.

The data collection in these outreach activities will not, in most cases, use statistical methods to select respondents. In some instances, when appropriate, random sampling techniques will be used to select the subset of attendees.

2. Procedures for the Collection of Information

The NCHS Data Detective Camp will employ automated and electronic technology (e.g., e-mail, CDC web-based surveys) to collect information from application forms, recommendation forms, registration forms, and evaluation forms. Respondents will submit their responses electronically; and responses will be tallied electronically. Electronic collection will minimize the burden on camp applicants and facilitate the most rapid processing of information. Paper forms will be made available upon request.

3. Methods to Maximize Response Rates and Deal with Nonresponse

N/A. This is a voluntary activity for children who apply to attend. As such, there is no nonresponse.

4. Tests of Procedures or Methods to be Undertaken N/A

5. Individuals consulted on Statistical Aspects and Individuals Collecting and/or Analyzing Data

N/A. Statistical consultation is not necessary for this type of data collection activity.

CDC staff trained in data protections of privacy and confidentiality will manage and process all data collected for this activity.
