

How to access CDC Advancing Violence Epidemiology in Real-Time (AVERT) Syndrome definitions in ESSENCE

In collaboration with CDC's National Syndromic Surveillance Program and syndromic surveillance analysts and epidemiologists in state and local health departments, CDC's National Center for Injury Prevention and Control developed several syndromic surveillance queries for identifying suspected emergency department visits related to violence-related injuries and mental health conditions. These queries, available in ESSENCE, can be used to complement efforts by state and local jurisdictions to analyze these types of injuries and identify patterns.
