

**Non-Substantive Change Request**  
**Control No. 1405-0173**  
**DS-6004**

The Department of State is requesting approval to amend the information collection in OMB Control No. 1405-0173, Request to Change End User, End Use, and/or Destination of Hardware, which the requestor submits using the webform DS-6004. The renewal of this information collection is currently under review. OIRA received it on April 1, 2026.

The following items are the proposed changes:

1. Change the notification's data elements from **“state the articles being reexported and the recipient government”** to **“identify the parts or components, U.S. Munitions List categories, quantity, value, and recipient.”**
2. Create an electronic notification option in PM's industry portal so the user does not have to snail mail a notification.
3. Move the requirement from ITAR § 123.9 to § 126.8.

Proposed changes to the regulations:

**§ 123.9(e)(3) today:**

The person reexporting the defense article provides written notification to the Directorate of Defense Trade Controls of the retransfer not later than 30 days following the reexport. The notification must state the articles being reexported and the recipient government.

**After the rule – § 123.9(e)(3) will be reserved, and the following will be in § 126.8(b)(6):**

The transferor provides written notification to the Directorate of Defense Trade Controls not later than 30 days following the transfer. The notification must identify the parts or components, USML categories, quantity, value, and recipient.

In our view, when the change is implemented, this change is non-substantive. The experience of the respondent will not be any different. Their obligation and burden will remain the same. If OIRA approves this request, the Department will acknowledge the approval for the change in the PRA analysis in the upcoming rulemaking.
