Subject: [EXTERNAL] ICR: Data System for Organ Procurement and Transplantation Network, OMB No. 0906-0110—
Revision
Date: Wednesday, July 8, 2026 12:01:51 PM

To Whom It May Concern:

On behalf of Vanderbilt Transplant Center, we appreciate the opportunity to comment on this proposal.

The request lacks sufficient detail for stakeholders to evaluate its impact. Specifically, HRSA should identify the “OPTN BOD-approved additional revisions” and the specific data collection forms affected.

The proposal also appears to reference existing Patient Safety contact management and patient transfer forms. HRSA should clarify whether these are revisions to existing forms or new data collection requirements. If new forms are proposed, the rationale should be provided, along with an explanation of how duplicative data entry and additional administrative burden will be avoided.

We recommend HRSA:

1. Identify all forms included in the proposal and the specific revisions under consideration.
2. Clarify whether Patient Safety contact management and patient transfer forms are revisions to existing tools or new requirements and explain how redundant data collection will be prevented.

Alexis Wilkins, MPH

Quality & Patient Safety Advisor, Thoracic Transplant
