STOP Match Calculation Worksheet

The STOP Program statute requires a match of 25% on grant funds under the program to each state (territories are exempted). However, match is exempted for subawards to tribes and to victim service providers for victim services. Thus, the amount of match owed is one third of the federal share of expenditures minus the total subaward amount spent by tribes and victim service providers for victim services. The purpose of this form is to document the amount of funds that supported subawards to tribes and to victim service providers for victim services, so states may accurately calculate their match requirement for each STOP Program award. States should complete this worksheet during the closeout period for each award. The worksheet must be submitted with the closeout packet. The Program Manager will request the worksheet if it is not submitted with the closeout packet. Awards cannot be closed without a completed Match Worksheet. **Please note: All yellow cells require user input.**
