Attachment T: Changes to Previously Approved Instruments and Justification

Document	Change	Justification
Attachment A: Mobility Services Tracking Tool	No changes made.	
Attachment B: The Child Assessment & The Obesity and Type II Diabetes Risk Assessment: Assent	Updated assent language to reflect continued participation in the follow-up data collection activities.	The study team will obtain assent from children ages 10 and older for continued participation in follow-up data collection. The updated language reminds participants of the study purpose, identifies the study team, and explains the ongoing data collection activities. Participants are informed that continued participation is voluntary and that they may choose whether to continue in the study.
	Revised wording from "We will also ask you about your gender and sexual orientation" to "We will also ask you about your sex and sexual orientation."	This change was made in response to Executive Order 14168.
Attachment C: The Child Assessment: Survey about Child – Follow-up (questions asked of parent or guardian)	Revised wording from "It's a real "zoo" where we live" to "It's really hectic where we live." (A.3D)	The change was made to improve clarity and comprehension. Study staff reported that some participants found the original phrasing confusing.
	Removed the question: Please let me know if the following describe nearly all, most, some, a few, or none of your child's friendships- The parents of his/her friends have graduated from college. (B.16B)	The question was removed due to limited data quality and utility. Approximately 65% of respondents selected "Don't know," indicating that many participants did not have sufficient knowledge to provide an informed response
	Added the response option "My child is homeschooled or attends school virtually" to the question "What is the most	The response option was added to ensure accurate data collection for participants who are homeschooled or attend school

	common way that [child's name] gets to school?" (B.11)	virtually and therefore do not use transportation to attend school.
	Added the response option "Not applicable" to the question "About how long does it usually take [child's name] to get to school. (B.12)	The response option was added to ensure accurate data collection for participants whose children do not travel to school, such as those who are homeschooled or attend school virtually
	Added the response option "Not applicable" to the question "Please rate how much you agree or disagree with the following statements- Your child feels close to people at school." (B.15a)	The response option was added to ensure accurate data collection for participants whose children are homeschooled or attend school virtually
	Added the response option "Not applicable" to the question "Please rate how much you agree or disagree with the following statements- Your child feels like a part of the school." (B.15b)	The response option was added to ensure accurate data collection for participants whose children are homeschooled or attend school virtually
	Added the response option "Not applicable" to the question "Please rate how much you agree or disagree with the following statements- Your child is happy to be at school." (B.15 c)	The response option was added to ensure accurate data collection for participants whose children are homeschooled or attend school virtually
	Added the response option "Not applicable" to the question "During the school year, about how many times a week does [child name] usually get breakfast at school?" C.16	The response option was added to ensure accurate data collection for participants whose children are homeschooled or attend school virtually
	Added the response option "Not applicable" to the question "During the school year, about how many times a week does [child name] usually get lunch at school?" C.17	The response option was added to ensure accurate data collection for participants whose children are homeschooled or attend school virtually

Attachment D.1: The Child Assessment: Direct Child Assessment – Follow-up	Added the response option "Not applicable" to the question "Please rate how much you agree or disagree with the following statements- You feel close to people at your school." (A.1a)	The response option was added to ensure accurate data collection for participants who are homeschooled or attend school virtually.
	Added the response option "Not applicable" to the question "Please rate how much you agree or disagree with the following statements- You feel like a part of the school." (A.1b)	The response option was added to ensure accurate data collection for participants who are homeschooled or attend school virtually.
	Added the response option "Not applicable" to the question "Please rate how much you agree or disagree with the following statements- You are happy to be at school." (A.1c)	The response option was added to ensure accurate data collection for participants who are homeschooled or attend school virtually.
	Removed the question: Please let me know if the following describe all, most, some, or none of your friendships- My friends' parents have graduated from college	Participants did not know the answer to this question.
	Added the response option "Not applicable" to the question "During the school year, about how many times a week do you usually get breakfast at school?" B.1	The response option was added to ensure accurate data collection for participants who are homeschooled or attend school virtually
	Added the response option "Not applicable" to the question "During the school year, about how many times a week do you usually get lunch at school?" B.2	The response option was added to ensure accurate data collection for participants who are homeschooled or attend school virtually
	Added the question "Do you NOW take any of the following prescription	This question was added because it is applicable to participants ages 12 years and older and will allow the study team to

	medicines to lose weight or mange diabetes?"	collect information on prescription medication use that may be relevant to study outcomes.
	Changed the response option from "Your Gender" to "Your Sex" for the question "What do you think is the main reason for this experience?" (A.14)	This change was made in response to feedback received from the federal government.
Attachment D.2: The Child Assessment: Direct Child Assessment – Executive Functioning Follow-up	No changes made. The instrument was previously referred to as attachment or instrument I.3; only the reference to D.2 has changed.	
Attachment E.1: The Child Assessment & The Obesity and Type II Diabetes Risk Assessment: Flyer	Updated flyer language for use during follow-up data collection activities.	The revised flyer will be used to notify participants that follow-up data collection is beginning. The flyer serves as a reminder about the purpose of the MOVED study and informs participants that the study team will be contacting them regarding upcoming follow-up activities.
Attachment E.2: The Child Assessment & The Obesity and Type II Diabetes Risk Assessment: Advance Letter	Updated letter language to reflect continued participation in the follow-up data collection activities. The instrument was previously referred to as attachment or instrument J.2.	The updated language reminds participants of the study purpose, identifies the study team, and explains the ongoing data collection activities. Participants are informed that continued participation is voluntary and that they may choose whether to continue in the study.
Attachment F.1: The Child Assessment & The Obesity and Type II Diabetes Risk Assessment –Email Reminder	Updated email language to reflect continued participation in the follow-up data collection activities. The instrument was previously referred to as attachment or instrument K.1.	The updated language reminds participants of the study purpose, identifies the study team, and explains the ongoing data collection activities. Participants are informed that continued participation is voluntary and that they

		may choose whether to continue in the study.
Attachment F.2: The Child Assessment & The Obesity and Type II Diabetes Risk Assessment – Follow-up Phone Call Script	Updated script language to reflect continued participation in the follow-up data collection activities.	The updated language reminds participants of the study purpose, identifies the study team, and explains the ongoing data collection activities. Participants are informed that continued participation is voluntary and that they may choose whether to continue in the study.
Attachment G: The Child Assessment & The Obesity and Type II Diabetes Risk Assessment: Consent	Updated consent language to reflect continued participation in the follow-up data collection activities.	The study team will obtain consent from participants who previously signed consent forms when Abt Global served as the IRB of record, in accordance with requirements of the Johns Hopkins University IRB. Because participants had already provided consent for baseline data collection, language related to baseline activities was removed so that the consent form focuses specifically on follow-up data collection activities.
	Added language required by the Johns Hopkins University IRB	The language was added to ensure compliance with Johns Hopkins University IRB requirements
Attachment H: The Obesity and Type II Diabetes Risk Assessment: Adult Survey – Follow-up	Added question “How many years have you lived in your current neighborhood?”	This question was added to collect information on neighborhood tenure and is consistent with measures used in the CCD baseline survey.
	Added question “How many years have you lived in your current home?”	This question was adapted from the neighborhood tenure question above and was added to collect information on residential tenure.

	Revised the question from “Sometimes things happen that completely throw your plans off course or mess things up. How likely or unlikely is it that something like that will happen to you or your family in the next 12 months? Would you say…” to “Sometimes things happen in life that mess everything up. Do you think something like this will happen to you or your family in the next 12 months?” (B.14)	The question was reworded to improve clarity and comprehension. The study team reported that some participants found the original wording confusing, and the revised language is intended to be more easily understood while maintaining the intent of the question.
	Revised the question “Have you done any of the following things in order to lose weight or keep from gaining weight during the past year including fasting, ate very little food, took diet pills, made yourself vomit, used laxatives, used diuretics (water pills), used food substitute (powder or special drinks), skipped meals, or smoked more cigarettes?” to include the statement “Please say yes if you have done one or more of those things. Remember, we will not share your answers with anyone.” (C56)	This change was made based on findings from baseline data collection. The additional language is intended to improve participant understanding of the question and reinforce the confidentiality of responses, thereby supporting more accurate reporting.
	Changed the response option from “Your Gender” to “Your Sex” for the question “What do you think is the main reason for this experience?” (C.60)	This change was made in response to Executive Order 14168.
Attachment I: The Obesity and Type II Diabetes Risk Assessment: Anthropometric Assessments – Follow-up (adult)	No changes made	

Attachment J: The Obesity and Type II Diabetes Risk Assessment: Anthropometric Assessments – Follow-up (child)	No changes made	
Attachment K: The Obesity and Type II Diabetes Risk Assessment: Blood Spot Samples – Follow-up (adult)	Removed “Estimated Average Glucose” from the laboratory result reported to participants.	This measure was removed because it is not directly analyzed or reported by the laboratory. Participants will continue to receive their hemoglobin A1c (%) results, which remain part of the study laboratory reporting.
Attachment L: The Obesity and Type II Diabetes Risk Assessment: Home Observations/Housing Assessment – Follow-up	No changes made	
Attachment M: The Obesity and Type II Diabetes Risk Assessment: Accelerometers – Follow-up (adult)	Replaced “ActiGraph” with “accelerometer.”	“ActiGraph” was replaced with the more general term “accelerometer” because the study team is now using a different device brand (Axivity). The functionality of the device remains the same, and all information provided in the study materials regarding accelerometer use continues to apply.
Attachment N: The Obesity and Type II Diabetes Risk Assessment: Accelerometers – Follow-up (child)	Replaced “ActiGraph” with “accelerometer.”	“ActiGraph” was replaced with the more general term “accelerometer” because the study team is now using a different device brand (Axivity). The functionality of the device remains the same, and all information provided in the study materials regarding accelerometer use continues to apply.
	Updated the cuff size ranges for all categories	The cuff size ranges were updated to ensure consistency with the blood

Attachment O: The Obesity and Type II Diabetes Risk Assessment: Blood Pressure Readings – Follow-up (adult)		pressure cuff size categories used in study procedures.
	Updated response provided to participants based on results.	The values were updated to align with American Heart Association recommended ranges and categories, as reflected in the study documentation.
Attachment P: The Obesity and Type II Diabetes Risk Assessment: Semi-Structured Interviews: Consent	Modified the document to align with the Johns Hopkins Bloomberg School of Public Health Institutional Review Board requirements.	Revisions were made to ensure that the document is consistent with the requirements and formatting standards of the Johns Hopkins Bloomberg School of Public Health Institutional Review Board. These changes reflect the transition of IRB oversight from Abt Global to the Johns Hopkins Bloomberg School of Public Health, which now serves as the IRB of record for the study.
Attachment Q: The Obesity and Type II Diabetes Risk Assessment: Semi-Structured Interviews – Follow-up (adult)	Revised the qualitative interview guide to refine question content and organization.	Revisions were informed by findings from earlier phases of the study and were made to ensure that the interview guide remains relevant to the current study objectives. Questions that were no longer applicable were modified or removed, and additional refinements were made to improve the quality and utility of the information collected.
Attachment R: The Child Assessment & The Obesity and Type II Diabetes Risk Assessment: Tracking Emails/Texts	Minor wording revisions made throughout the document.	Administrative updates were made to reflect that study procedures will now be implemented by Johns Hopkins University staff rather than Abt Global personnel.
Attachment S: The Child Assessment & The Obesity and Type II Diabetes Risk Assessment: Tracking Calls	Minor wording revisions made throughout the document.	Administrative updates were made to reflect that study procedures will now be implemented by Johns Hopkins

		University staff rather than Abt Global personnel.
	Reduced the number of requested contact referrals from three individuals to one individual.	The number of requested contacts was reduced to minimize participant burden
Supporting Statement A	Modified the incentive amount	Incentives are increased to ensure that families are adequately compensated for their time and effort in participating in the study.
