

NON-SUBSTANTIVE CHANGE REQUEST JUSTIFICATION
OMB CONTROL NUMBER 3060-0519

The Federal Communications Commission (FCC) is submitting this non-substantive change request to the Office of Management and Budget (OMB) for approval of non-substantive changes made to the rules that govern robocalls as reflected in OMB control number 3060-0519. Pursuant to an Order released on October 1, 2026, FCC 26-67, the changes are being made to modernize our rules to reflect changes in technology and industry practices to streamline the ability of callers to process requests to revoke consent to robocalls. The changes do not introduce any new policy concepts, new program goals nor increase the estimated time or financial burden placed on respondents. They impose no new mandates, do not remove existing flexibilities, and do not introduce new reporting, paperwork, or operational costs for regulated entities.

Specifically, the FCC modifies 47 CFR § 64.1200(a)(9), (10), (11), and (12) of our rules to allow callers to interpret a revocation request from a consumer as applying only to the specific category of robocalls to which the revocation was directed and not all robocalls; allow callers the option to designate an exclusive means by which consumers may revoke consent instead of requiring callers to honor all revocation requests made using any reasonable method; and grants flexibility to financial institutions to make better use of an existing exemption to the consent requirement to alert customers to fraudulent activity.

The respondent categories, burden hours, and costs of this Information Collection are not increased by these non-substantive changes to our rules that will allow respondents the option to streamline the processing of revocation requests.
