Non-substantive Change Request for

3060-0798

On November 2, 2026, the Office of Management and Budget (OMB) approved revised collections for OMB control number 3030-0798 for information collected via FCC Form 601. The Paperwork Reduction Act (PRA) package sent to OMB contained revised collections from the Commission's 2026 *900 MHz 5/5 Report and Order*, 27.1503 and 27.1505, but inadvertently left out section 27.1054. The *900 MHz 5/5 Report and Order* amended the 900 MHz broadband rules to allow for paired five megahertz blocks to be used to provide broadband service, provided for a voluntary transition, and kept the existing band plans in place. Section 27.1504 was intended to be included in the PRA package sent to OMB and as such we are now requesting a non-substantive change to this approval to include 27.1504 as intended. Section 27.1504 addresses the rules for mandatory relocation of certain licensees. The *900 MHz 5/5 Report and Order* kept these provisions in place, but it amended 27.1504 subsections (d) and (g) to direct applicants to submit related information through ULS on FCC Form 601. No substantive requirements are being newly placed on the applicants, rather we are directing them to use FCC Form 601 for certain communications thus requiring OMB approval. There are no changes to the burden hours or cost for this collection because they were already accounted for when the first submission was made to OMB for review and approval. Lastly, an updated supporting statement has been submitted to OMB for review.
